

Change starts with  
YOU

---

A Presentation By:  
Salvatore D'Agostino

# What is act now?

---

Act now is my final project for the start2impact front end developer course

Act now is a website that shows the dangers of climate change

To create this project I used react, tailwind and the [globalarning.org](#) API

So, how will you fight  
CLIMATE CHANGE?

# You can make an impact by...

---

## **Saving Energy**

Opt for energy-efficient bulbs and appliances, and switch lights off when not in use. Go solar if possible!

## **Cycling To Work**

Cycling is not only great for the environment, it's great for your health.

## **Having An Offset Mindset**

Buy carbon offsets for unavoidable emissions. For example, when you travel by plane.

## **Going Natural**

Use insulation and shade instead of heaters and air conditioning.

# You can inspire others to act by...

## **Making Your Voice Heard**

Let decision makers know that climate change matters to you. You can attend protests, write emails, blogs etc.

## **Sharing Your Own Actions**

By talking about what you're doing to fight climate change, you'll inspire others to do the same.

## **Getting Social**

Social media platforms are powerful tools for raising awareness and educating others about climate change.

THANK YOU

Act Now!
